questions:
give in the image

generate perfact topic performance analysis and give me percentages

Nice dashboard 👀 — this gives enough signal to do a **clean, topic-wise performance analysis**.

I'll base this **strictly on the questions visible in the image** and their **accuracy** %, then map each question to the topic you listed.

📊 Topic-wise Performance Analysis

1️⃣ AddTwoNumbers

- **Related Question**
  Implement a JavaScript function named `addTwoNumbers`...
- **Accuracy: 0.00%**
- **Performance:** ❌ Very Weak
- **Insight:** Learners struggled completely with basic function implementation and parameter handling.

👉 **Needs immediate attention**

2️⃣ Algorithm

- **Related Questions**
  - What is the most fundamental definition of an algorithm? (75%)
  - What is the primary function of an algorithm? (50%)
  - How does an algorithm differ from a computer program? (75%)
- **Average Accuracy:**

$$(75 + 50 + 75)/3 = \mathbf{66.67\%}$$

- **Performance:** ⚠️ Moderate
- **Insight:** Conceptual understanding exists, but clarity on purpose and abstraction is inconsistent.

3️⃣ Definition

- **Related Question**
  - What is the most fundamental definition of an algorithm?
- **Accuracy: 75.00%**
- **Performance:** ✅ Good
- **Insight:** Most learners understand what an algorithm *is* at a basic level.

4️⃣ Definiteness

- **Related Question**

- The property of ‘Definiteness’ in an algorithm requires that every step must be:
- **Accuracy: 100.00%**
- **Performance:** 🟢 Excellent
- **Insight:** This concept is very well understood.

5️⃣ Effectiveness

- **Related Question**
  - The term ‘Effectiveness’ in algorithm design means that:
- **Accuracy: 100.00%**
- **Performance:** 🟢 Excellent
- **Insight:** Learners clearly grasp executability and practicality of steps.

6️⃣ Eventually (Finiteness)

- **Related Question**
  - Which characteristic of an algorithm guarantees that it will eventually stop?
- **Accuracy: 50.00%**
- **Performance:** ⚠️ Weak
- **Insight:** Confusion between finiteness, effectiveness, and efficiency.

ChatGPT 5.2 Temporary Chat •••

7️⃣ Description

- **Related Question**
  - Which of the following is a non-algorithmic description of how to solve a problem?
- **Accuracy: 0.00%**
- **Performance:** ❌ Very Weak
- **Insight:** Learners cannot distinguish between vague descriptions and formal algorithms.

8️⃣ Representation

- **Related Question**
  - Which representation uses geometrical shapes connected by lines to show the flow of control?
- **Accuracy: 100.00%**
- **Performance:** 🟢 Excellent
- **Insight:** Flowcharts and visual representations are very clear to learners.

9️⃣ Efficiency

- **Related Questions**
  - What primary method is commonly used to analyze the efficiency of an algorithm... (75%)
  - A valid algorithm must accept zero or more inputs. How many outputs must it produce? (66.67%)
- **Average Accuracy:**

$$(75 + 66.67)/2 = \mathbf{70.83\%}$$

- **Performance:** ✅ Good
- **Insight:** Students understand efficiency analysis (Big-O), but formal properties need polish.

🧮 Final Topic Performance Summary

Topic	Accuracy	Performance
AddTwoNumbers	**0.00%**	❌ Very Weak
Algorithm	**66.67%**	⚠️ Moderate
Definition	**75.00%**	✅ Good
Definiteness	**100.00%**	🟢 Excellent
Effectiveness	**100.00%**	🟢 Excellent
Eventually	**50.00%**	⚠️ Weak

Topic	Accuracy	Performance
Description	**0.00%**	❌ Very Weak
Representation	**100.00%**	🟢 Excellent
Efficiency	**70.83%**	✅ Good

🎯 Key Teaching Insights

- 🔥 **Critical Gaps:**
  `AddTwoNumbers`, `Description`, `Eventually`
- 💪 **Strong Areas:**
  `Definiteness`, `Effectiveness`, `Representation`
- 📘 **Improve With:**
  - More **coding practice**
  - **Algorithm vs description** comparisons
  - Clear examples for **finiteness**

If you want, I can:

- Convert this into **auto-generated teacher feedback**
- Design **remedial quizzes per weak topic**
- Generate **student-wise insights** next 🚀
